Remote access worked great for users:

"It **worked really well** to be able to use remote access with help/coordination from the LTER RAs."

"We really appreciate the team effort at Toolik to help us get our data. Given the nature of our work, this was the extent of remote access that it was appropriate to request and we were very happy and grateful for the help."

Drone data

---

## Suggested capabilities for remote access

- Soil sampling

- Data tower downloads

“The EDC did a great job of sampling & record keeping. In the future, we could use a little more communication on scheduling expected field/sampling dates.”

Wiley Mill (plant biomass grinder)

---

## Helicopter

" In certain years, communication with the helicopter coordinator could be improved. In some seasons, it's really hampered our research efficacy. However, it's been really hit or miss – some coordinators (such as 2019) were great."

## Snowmachine

" support

---

100 % understood the Toolik policies and know how to report offenses.

" Indirectly related to Title IX , I would like to see Toolik create more space for antiracism and bystander intervention training/discussions."

" It could use more examples of how harassment could manifest in a field-based and highly remote environment. It's such a specific and unusual environment to be in, broad Title IX trainings don't really grasp or translate to the lived experience well."
